

Integration Datasheet

eReview takes enterprise document view, mark-up and print functionality to a whole new plane by offering real-time collaboration, synchronous and asynchronous review processes, web-conferencing and much more. eReview enables organizations to work with hundreds of file formats, including raster and scanned images, Office documents, CAD models, and many other file formats, all from within a single browser interface.

eReview being highly interoperable, remains seamlessly integrated with other enterprise-wide ECM, PDM, PLM, CRM and ERP solutions including EMC Documentum Webtop. Documentum users can easily view, mark-up and print in-process documents and drawings without the original software. This integration provides Documentum users additional functionality such as secured annotation, distributed printing and plotting and many real-time collaboration features. This integration is ideally suited for applications in government, financial services, insurance, manufacturing, engineering and construction project management to users solve many of document review, approval and collaboration challenges.

eReview for Documentum is a separate integration module that seamlessly integrates eReview with Documentum. Documentum-WebTop Login from within the eReview interface facilitates the users to login to the Documentum vaults enabling them to share, conference, view and markup documents in real-time, thereby providing a true Web-based, cross-platform, server-centric solution.

Integration Highlights:

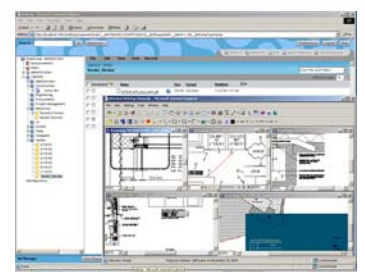

- Co-View, Co-Markup and Distributed Print of multiple document types directly out of Docbase repository
- View and annotate Office documents, PDF document and Scanned Images together in one applet instance
- Implementation of secured annotation capability on multiple documents
- Customize WebTop user interface to display annotated document indicator icons
- Two way integration with DocBase. Launch viewer from WebTop document links and list documents in viewer applet from WebTop to select and open
- Load selective metadata associated with documents in eReview, modify metadata content using eReview and save modified content back into docbase
- Limit user access to document viewing and annotation capabilities. Add or remove viewer action buttons to create role based customized tool set
- Automate process driven redaction and watermark capabilities during viewing and printing documents
- Start real-time, document-centric collaborative meetings, right from the Docbase repository
- Experience both Synchronous and Asynchronous meetings based on pre-selected documents among a set of invited users in real-time right from ECM vault
- Use both java and DoNet based DCM API to maintain security integrity to access documents and annotations
- eReview Java Script API to perform Web2 programming. Pre load the applet and use java Script API to interact with the applet from WebTop

Why do we need a View and Annotation tool - eReview Highlights:

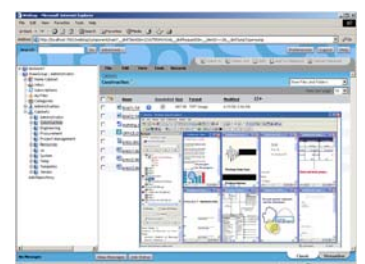

eReview View and Annotation tool integrated with Documentum provides a customized visual workflow that is developed and implemented to solve many specific business challenges in day-to-day enterprise activities. Following are the key factors why ECM users are benefited by the eReview view and annotation tool.

Documentum Action Menu

Engineering Drawings

Office Formats

Integration Datasheet

Enhanced viewing and reviewing support on many file formats:

- Provides Multiple Document Interface (MDI). Open multiple documents or drawings in multiple child windows
- Visual comparison of multiple document formats in side by side is possible inside eReview viewer frame windows
- Web-based thin client viewer for the end user to download. Reduce training costs by presetting the same applet interface for hundreds of formats
- Cross platform support. Server centric document view and annotation provided on multiple operating systems for different versions of UNIX, Windows, LINUX and MAC-OS/X. This reduces travel, telephone, fax, Internet bandwidth & courier costs
- Large documents handled with tremendous viewing speed achieved through fast server centric viewing approach. Huge multiple page TIFF, PDF and other documents are viewed instantly in a web browser
- Secured viewing with 128-bit SSL (https) support
- View and annotate Office formats in non-windows environments
- Support for CMYK colors for raster formats
- Open files in preview mode for slow speed in internet connections
- Open multiple documents as a single compound document with multiple virtual pages
- Full-text search capabilities on text-based documents

Annotation Features:

- Easy-to-use industry standard intuitive annotation tools
- Multiple markup layers to segregate markups created by multiple reviewers
- On the screen text markups. **WYSIWYG** text editor support. Text markups support multiple font styles in one text object
- Support for textual comments is possible for all graphical markups
- Put comments on documents through easy-to-use, threaded comment markups
- A subset of chat session gets associated to a markup created on certain document reason
- Copy and paste markups across the document types
- Show and hide markup layers created by multiple reviewers
- Turn graphical annotations into icons to clear the annotation clutter to read/look into document content
- Support for **Redaction** on any document through pre-created annotations
- Pre-created annotations are applied to the document through API integration
- Search annotations based on time
- Instantly search only the pages with markups in an explorer-like, tree structure
- Traverse through annotations within multiple pages of many documents just clicking on next/previous annotation button

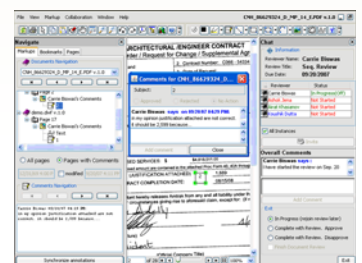

eReview MDI with Annotations

eReview Instant Meeting

UI Customization:

- Roll your own eReview - It is very easy to change tool images, modify name of menu items, add or remove tool buttons and menu items used in tool buttons
- Load the new defined configuration saved into a XML file through eReview API integration
- Dock, undock, move or float eReview toolbars inside eReview viewer frame window
- Modify viewer capability by adding or deleting tool buttons and menu items
- Administrator can create multiple such limited profiles for many named users and load them automatically as users start their viewers from server

eReview Asynchronous Session

Synchronous and Asynchronous Meetings:

- Offers real-time sharing of documents, data as well as chat and whiteboard under one simple-to-use meeting interface.
- Allows multiple participants to be controlled by a meeting chairperson
- Parallel workflow on few selected documents is possible for a group of participants using eReview Asynchronous Meeting module
- Strong API support for start and join both synchronous and asynchronous meetings
- Finished meetings are possible to playback in real-time event sequences
- Support for audio conferencing
- Support for desktops/applications sharing over http
- Transfer chairperson control among many attendees
- Whisper or direct chat messages and graphical annotations in a meeting
- Restore previously held meetings to continue in future once again with same set of documents among same group of participants
- Chairperson with synchronized control to let all participants see the same view of the meeting screen
- Support for whiteboard and polling in an on-line meeting
