greg.lunsford@zenogroup.com**Industry Leaders Partner with Oracle(r) to Support First True Enterprise-Wide Content Management Solution****Partnerships Provide Customers with Additional Integration Support and Content-Enabled Applications for Oracle Files 10g**

ORACLE(r) OPENWORLD, San Francisco 08-DEC-2004 12:00 AM Oracle today announced evidence of strong support for its content management offering through partnerships with leading technology vendors that leverage the capabilities of Oracle(r) Collaboration Suite Files 10g. Industry leaders that will provide enhanced functionality for Oracle Files 10g, the first content management solution developed for true enterprise-wide deployment, include Adobe (NASDAQ: ADBE), Arbortext, Captiva Software (NASDAQ: CPTV), Kofax, netGuru (NASDAQ: NGRU), Network Appliance (NASDAQ: NTAP), Sun Microsystems, Inc. (NASDAQ: SUNW), Symantec (NASDAQ: SYMC) and TMSSequoia (OTC Bulletin Board: TMSS). Together with these and other partners, Oracle will provide complementary content management capabilities including storage that can help companies with regulatory compliance, document capture, image viewing and annotation, as well as additional document control and security.

Industry analysts agree that enterprise-wide content management is a growing need for businesses, which must manage ever-expanding content volume while meeting increasingly strict content-related government regulations. Industry analyst firm IDC estimates the overall content management market will increase to more than \$4.5 billion in 2008. Oracle and its partners plan to capitalize on the growing need for secure, scalable and affordable technology that helps manage the entire content lifecycle.

"The combination of Oracle Files 10g and Network Appliance SnapLock(tm) gives our customers a powerful yet simple solution to help meet regulatory, IT and business challenges," said Patrick Rogers, vice president, Solutions and Alliance Marketing, Network Appliance. "Customers can benefit from the integration between a comprehensive compliance storage solution and a cost-effective content management offering."

Oracle Files 10g, available on its own or as part of Oracle Collaboration Suite 10g, was developed with the average business user in mind to help increase productivity by delivering content management tools where and when they are needed. Built on the Oracle Database and Oracle Application Server, Oracle Files 10g provides outstanding scalability, security and reliability. In addition, the offering incorporates advanced records management capabilities that can facilitate regulatory compliance and help reduce the risk associated with information discovery.

"As Oracle extends content management across the enterprise, customers require more advanced and scalable input management capabilities," said Reynolds C. Bish, president and chief executive officer, Captiva Software. "Our InputAccel(tm) offering provides organizations using Oracle Files 10g with an open document capture solution that can be tailored easily to meet specific business requirements."

"Oracle successfully has developed partnerships with key providers that will enable customers to reap immediate business benefits with Oracle Files 10g," said Greg Doherty, vice president, Oracle Collaboration Suite, Oracle Corp. "The strength of the companies involved highlights the market opportunity for Oracle Files 10g, and their offerings can help customers achieve a greater return on their investment."

About Oracle Collaboration Suite 10g

Oracle Collaboration Suite 10g is the first enterprise class collaboration product built on the right architecture; Oracle Database 10g and Oracle Application Server 10g. The result is a solution that is secure, reliable, highly scalable and enables organizations to drive down total cost of ownership. It is built on service-oriented architecture that allows collaboration to become a seamless part of your application infrastructure, helping drive higher efficiencies and levels of productivity. Oracle Collaboration Suite 10g is the foundation for the collaboration-enabled enterprise.
